

To improve the transfer of the latest findings in science and research to practice, WTA CZ began in 2009 a new Authorisation activity in the framework of Authorisation of entities in the field of rehabilitation of concrete buildings and, subsequently in 2011 for the field of rehabilitation of walled constructions against dampness. The aim is to convey the new findings to participants in the form of seminars, and other events and then check their knowledge with the successful candidates being given authorisation that proves their expertise in the given field.

The actual process of verification is strictly governed by rules for authorisation that state:

- Awarding authorisation,
  
- The requirement of an application for awarding authorisation,
  
- Requirement on specialist practice,
  
- The assembly and work of examining commissions (further referred to only as "the commission"),
  
- The manner and course of expert examinations (further referred to only as "examinations"),
  
- Documents about authorisation.

Relevant documents (text of the authorisation regulations, application for awarding authorisation) are available at [www.wta.cz](http://www.wta.cz) in the Czech language.
